Conveniently located off of Hwy 278 (1644 Piedmont Hwy), west of Cedartown, GA.

**B** BARNES  
HEREFORDS

WHITE HAWK  
RANCH

***Welcome to the Beefmaker sale. The bulls you will see are the result of the very best genetics to produce quality beef.***

*Our effort over the years has been to increase the quality of the bulls we sell for the commercial producer. To do so we have concentrated on birth weight and yearling weight so calving ease is bred into our bulls. Our continuation of carcass traits are part of our ongoing genetic improvement.*

*As a child my daddy ran a dairy and when he quit the dairy (thank goodness) he raised polled Hereford cattle. Two uncles also had Hereford herds. So, Herefords are in our genetic makeup as well as our cattle.*

*We always enjoy having you at our farm and sale barn. Daddy always told me we trade with folks for a lifetime and not just today. We still adhere to that slogan as we want you as customer for years. We know you will be pleased with the offerings you will see in our sale.*

# TERMS & CONDITIONS

1. **TERMS:** Cash or check. Each animal to be sold to the highest bidder. The auctioneer shall settle any disputes as to bids. All cattle are to be paid for by the purchasers during or immediately after the sale and will not be released until settlement has been made. Each animal will be at the purchaser's risk immediately after the animal is sold.
2. **REGISTRATION CERTIFICATES** of the animals will be transferred to the buyer at the seller's expense. All calves born before the sale will be registered by the seller. All calves born after the sale will be registered by the buyer. Each buyer must be sure to give the clerk his proper name and address for making transfers. All certificates will not be furnished by the seller on females carrying the service of non-owned AI sires.
3. **EPDS:** The EPDs included were current as of 9/9/2019. The most current information can be viewed on [www.hereford.org](http://www.hereford.org).
4. **HEALTH:** All cattle selling will have interstate health charts required for shipping into other sections of the United States. All females who are old enough are officially calfhood vaccinated.
5. **GUARANTEE:**  
**Bulls** – All Bulls have passed a breeding soundness exam (BSE) and have been trich tested negative. Bulls are fully guaranteed (see limited warranty) for 1 year, except for mortality. (Mortality insurance is available through Harding and Harding at the clerk's desk). **Limited warranty:** if a bull needs to be replaced, a like animal will be substituted or a credit purchase price less salvage value of the animal will be applied toward a future purchase in our next sale.  
**Females** – Females sold in this sale are guaranteed to be breeders. A properly handled and cared for animal that fails to breed within 12 months of sale date, may be returned if the buyer notifies the seller in writing by Oct. 21, 2020. The seller will have one 90-day breeding season to determine pregnancy. If at the end of that time the animal fails to breed, a like animal will be substituted or a credit purchase price less salvage value of the animal will be applied toward a future purchase.  
 All females selling that are determined to be safe in calf will sell that way and will carry no further guarantee.
6. **LIABILITY:** All persons who attend the sale do so at their own risk and the owners and sale manager assume no liability, legal or otherwise, for any accidents that may occur.
7. **ANNOUNCEMENTS** at the sale ring by the owners or auctioneer concerning the cattle will take precedence over statements in the sale book.
8. **EPD ABBREVIATIONS:** CED (Calving Ease Direct); BW (Birth Weight); WW (Weaning Weight); YW (Yearling Weight); Milk (Maternal Milk); M&G (Maternal Milk & Growth); MCE (Maternal Calving Ease); UDDR (Udder Suspension); Teat (Teat Size); SC (Scrotal Circumference); CW (Carcass Weight); FAT (Rib Fat); REA (Ribeye Area); MARB/IMF (Intramuscular Fat); BMI\$ (Baldy Maternal Index); BI\$ (Brahman Influence Index); CEZ\$ (Calving Ease Index); CHB\$ (Certified Hereford Beef Index).
9. **INSURANCE:** Insurance will be available through Harding and Harding by contacting the sale cashier when settlement is made.
10. **DELIVERY:** Trucks will be available sale day.

**Bulls** – We offer free delivery on bulls to central points in Georgia and adjoining states on total bull purchases of \$5,000 or more. Also included are Louisiana, Florida, Mississippi and Kentucky. Other deliveries at cost.

**Females** – Trucking will be available sale day. No free delivery on females.

11. **ORDER BIDS:** Order bids may be handled by the owners or any of the sale staff. Please feel free to call.
12. **DONOR FEMALE CO-OWNERSHIP**  
 Donor will stay in the possession of WHR for management and Dailey care. First natural calf on yearling heifer will be jointly owned.  
 Cow's with fall calves at side calf will be jointly owned  
 All eggs produced via conventional o .J!Mii' will be divided by ownership percentage.  
 All conventional flushes will be performed at WHR C11'RMS-W' Dixieland Embryo Transfer.  
 All embryo expenses will be shared jointly by% of ownership. (WHR labor or tect is at no cost)  
 Co-Owners will have option of putting eggs in their own receipt or will have access to WHR Co-op herd to raise ET to 7 months of age. (See Gary for Co-op Herd Information)  
 Each succeeding Natural Heifer calf will be 100% owned by WHR for the daily care and management of Donor (If bull calf will be owned by % of ownership). WHR assumes no liability for animal mortality insurance is available through Harding & Harding at the clerks desk or Jack D. Hedrick.
  1. Calf
  2. Flush 2 to 3 times
  3. Bred back
  4. Flush 2 to 3 times
  5. Bred back
13. **FLUSH INFORMATION**
  - Buyer pays flush expense for ET veterinarian
  - No charge for White Hawk Ranch Sires
  - Outside Bulls at Buyers expense
  - Guaranteed 6 freezable eggs
  - Guaranteed three 60-day pregnancies
  - Implanted by Certified ET Technician

Prime Time is the total package. He has exceptional phenotype with great eye-appeal. He has a stout EPD profile across the board to go with his exceptional pedigree on both the maternal and paternal side. Prime Time's maternal granddam, 111X was the \$12,500 lead off female in the record breaking Star Lake dispersal sale, going to CES Polled Hereford of Georgia. A granddaughter of both Investor Gal 129R and Rockin Erica 38F, Simply Stunning transmits combined power, eye-appeal and maternal strength into her offspring. R91 exudes that same genetic advancement right out of the gate with Prime Time being her first natural calf. In short, Prime Time has the numbers and the pedigree to go with his flashy good looks. We here at Barnes Herefords are very excited about his future.

- ★ Herd bull prospect.
- ★ Beautiful dark red color.
- ★ 605F is a curve bender from birth to yearling. Just check out his carcass weight of 90.
- ★ Maternal brother to lot 201.
- ★ 216Y does not miss and this is a natural calf from her.
- ★ Maternal brother to 734B reference sire. He is the main herd bull for Luttrell Cattle Company in Kentucky.

WHITEHAWK PARAMOUNT 372Z

Sire of Lots 313 and 314. Grandsire of Lots 313A.

★ 372Z is a brood cow maker. He produces calving ease and great maternal cow size. He is also top of the breed in udder and teats while also leading for carcass weight. He is a very balanced bull. You will love his daughters.

GV 579 VICTORIA 9710 - Dam of Lot 315 and Granddam of Lot 315A.

## THE HEREFORD ADVANTAGE PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHB\$ index.

### PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at [HerefordFeederCattle.com](http://HerefordFeederCattle.com)

Certified Hereford Beef Index(CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHB\$ value ranking in the top 50%.

WHITEHAWK NATURAL 290E

# UNDERSTANDING HEREFORD EPDS

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and \$ indexes includes:

## Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

## Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

## Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

## Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

## Dry Matter Intake (DMI)

The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

## Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

## Sustained Cow Fertility

The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

## Maternal Milk (MM)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

## Maternal Milk & Growth (M&G)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

## Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

## Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

## Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the

difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

## Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

## Carcass Weight (CW)

Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

## Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## Baldie Maternal Index (BMIS)

The Baldie Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

## Brahman Influence Index (BIS)

The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

## Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.
