Conveniently located off of
Hwy 278 (1644 Piedmont Hwy), west of Cedartown, GA.

Welcome to our 9th Annual Barnes and White Hawk Spring Edition Beefmaker Bull and Female Sale- Friday February 15th, 2019 at 12:00 P.M.

First off we want to thank all of our past buyers that have allowed us to push our programs forward. We strive to produce sound and functional bulls that have strong EPDs with an emphasis on superior maternal and carcass quality. We have a strict selection process to ensure that only the very best cattle are showcased at our annual auctions. As you study this sales offering we are confident you will find offerings that represent some of the finest genetics within the Hereford breed. Your selection will make an immediate impact in the success of your genetic base to make the value-added genetics that increase your bottom dollar. We strive to provide good useable data to help you with your purchasing decisions. The animals being offered are not just phenotypically sound but they are also a real pleasure to look at in the pasture.

We also would like to mention that we are very excited about the Georgia Hereford Association working on a Hereford feeder calve sale this fall. More information about this sale should be released as soon as the details are worked out with John Watson President of the Georgia Hereford Association.

The sale offering will be available for your viewing, Thursday, February 14th, 2019, All Day. We did not include pictures of our females in the catalog for this sale because of all of the rain. Videos are available starting February 1st of the females along with the Bulls. We invite you to join us for a cookout served at 6:00 PM. We look forward to seeing you. If you need any assistance, or additional information on the cattle offered please do not hesitate to contact us.

Terms & Conditions

1. **TERMS:** Cash or check. Each animal to be sold to the highest bidder. The auctioneer shall settle any disputes as to bids. All cattle are to be paid for by the purchasers during or immediately after the sale and will not be released until settlement has been made. Each animal will be at the purchaser's risk immediately after the animal is sold.
2. **REGISTRATION CERTIFICATES** of the animals will be transferred to the buyer at the seller's expense. All calves born before the sale will be registered by the seller. All calves born after the sale will be registered by the buyer. Each buyer must be sure to give the clerk his proper name and address for making transfers. AI certificates will not be furnished by the seller on females carrying the service of non-owned AI sires.
3. **EPDS:** The EPDs included were current as of 12/20/16. The most current information can be viewed on www.hereford.org.
4. **HEALTH:** All cattle selling will have interstate health charts required for shipping into other sections of the United States. All females who are old enough are officially calfhood vaccinated.
5. **GUARANTEE:**
Bulls – All Bulls have passed a breeding soundness exam (BSE) and have been trich tested negative. Bulls are fully guaranteed (see limited warranty) for 1 year, except for mortality. (Mortality insurance is available through Harding and Harding at the clerk's desk).
Limited warranty: if a bull needs to be replaced, a like animal will be substituted or a credit purchase price less salvage value of the animal will be applied toward a future purchase in our next sale.
Females – Females sold in this sale are guaranteed to be breeders. A properly handled and cared for animal that fails to breed within six months of sale date, may be returned if the buyer notifies the seller in writing by Aug. 17, 2017. The seller will have one 90-day breeding season to determine pregnancy. If at the end of that time the animal fails to breed, a like animal will be substituted or a credit purchase price less salvage value of the animal will be applied toward a future purchase.
All females selling that are determined to be safe in calf will sell that way and will carry no further guarantee.
6. **LIABILITY:** All persons who attend the sale do so at their own risk and the owners and sale manager assume no liability, legal or otherwise, for any accidents that may occur.
7. **ANNOUNCEMENTS** at the sale ring by the owners or auctioneer concerning the cattle will take precedence over statements in the sale book.
8. **EPD ABBREVIATIONS:** CED (Calving Ease Direct); BW (Birth Weight); WW (Weaning Weight); YW (Yearling Weight); Milk (Maternal Milk); M&G (Maternal Milk & Growth); MCE (Maternal Calving Ease); UDDR (Udder Suspension); Teat (Teat Size); SC (Scrotal Circumference); CW (Carcass Weight); FAT (Rib Fat); REA (Ribeye Area); MARB/IMF (Intramuscular Fat); BMI\$ (Baldy Maternal Index); BII\$ (Brahman Influence Index); CEZ\$ (Calving Ease Index); CHB\$ (Certified Hereford Beef Index).
9. **INSURANCE:** Insurance will be available through Harding and Harding by contacting the sale cashier when settlement is made.
10. **DELIVERY:** Trucks will be available sale day.
Bulls – We offer free delivery on bulls to central points in Georgia and adjoining states on total bull purchases of \$5,000 or more. Also included are Louisiana, Florida, Mississippi and Kentucky. Other deliveries at cost.
Females – Trucking will be available sale day. No free delivery on females.
11. **ORDER BIDS:** Order bids may be handled by the owners or any of the sale staff. Please feel free to call.
12. **HEREFORD BULLS:** Selling 2/3 interest and full possession in every Hereford bull. Buyer owns full possession and 100% salvage value. White Hawk Ranch and Barnes Herefords will retain 1/3 full semen interest in each bull. White Hawk Ranch and Barnes Herefords reserve the right to collect semen at our expense and buyer's convenience.

- ★ When you analyze 426E you will see he is very complete in his overall makeup and design.
- ★ 426E has great feet, legs, short marked, red to the ground, 100% eye pigmented in both eyes with outstanding performance and carcass merit
- ★ We had visitors state that 426E is the best phenotypical bull we have ever raised and sold.
- ★ This 4013 crossed on BG H Whitehawk Rancher 1016 daughters is an outstanding cross.
- ★ White Hawk Ranch is retaining 1/3 semen interest and selling 2/3 interest with buyer getting full possession.

- ★ 554E has all the bells and whistles you could ask for in a bull.
- ★ He has great calving ease, birth weight, growth and carcass all in one incredible phenotypical package.
- ★ White Hawk Ranch is retaining 1/3 semen interest and selling 2/3 interest with buyer getting full possession.

20-25 Luttrell Fall Bred Heifers

Sired by White Hawk and Barnes bulls bred to calving ease Brangus bull
 Some of these heifers will be 2 generations of WHR and Barnes breeding

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 15 traits and calculates four profit (\$) indexes. Research is ongoing to develop traits for fertility, feed intake and docility.

Today, DNA-marker tests can be used to enhance the accuracy of Hereford EPDs. AHA blends marker information with phenotypic information and pedigree to produce a GE-EPD. Look for the GE-EPD logo denoting an animal has been tested.

The current suite of Hereford EPDs and \$ indexes includes:

Calving Ease – Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Maternal Milk (MM)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&GEPDof10lb.(29minus10=19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a MCE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would

calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has a MCW EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Carcass Weight (CW)

Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPDof84andsireBhasaCWEPD64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldie Maternal Index (BMIS)

BMIS is a maternally focused index that has a production system based on 1,000-Hereford x Angus females with a progeny harvest endpoint directed toward Certified Hereford Beef (CHB®). This index is more critical of CE than the Brahman Influence Index (BIIS) and also has significant weight on fertility. There is positive weight on WW and a slightly negative weight on YW, which promotes early growth and then a slow down on growth to keep mature size manageable. The emphasis of IMF is greater than the emphasis of REA. This is true because of the price difference of the Choice-Select spread and the fact that there is very little incentive to produce cattle better than a Yield Grade 3. This index is geared to service any commercial program that has British- cross cows.

Calving Ease Index (CEIS)

This is a general purpose index that focuses on identifying bulls that can be used on heifers and then ultimately the calves will be marketed through the CHB program. As you might expect, CE and MCE carry significant weight in this index along with fertility. There is very little weight put on growth traits and less emphasis on carcass. Remember, this is a general index that is specifically designed to be used in a heifer program.

Brahman Influence Index (BIIS)

BIIS is a maternally focused index that is based on a 1,000-head cow herd of Brahman x Hereford cows. The progeny for this index will be harvested in a commodity-based system since CHB does not accept Brahman-influenced cattle into the program. This index has less emphasis for CE than any of the other indexes. There is emphasis on both REA and IMF since the cattle will be harvested through a commodity market. The largest emphasis is in fertility, which is measured solely by SC at the present time. Obviously, the target for this index is the producers in the Southern regions of the U.S. where the bulls are typically sold to commercial cattlemen that have Brahman-influenced cow herds.

Certified Hereford Beef Index (CHBS)

This is a terminal sire index that is built on a production system where Hereford bulls sire calves for the CHB market. There is some pressure put on CE and then positive weight on both WW and YW. Remember that all offspring in this index are harvested, so they need to be born alive and then grow fast at all stages of life. Of course, we have much more emphasis on fat in this index, as we want the cattle to stay lean. There is also a significant weight on both REA and IMF with more emphasis again on IMF. This index would be used by producers who have a target of producing bulls for a terminal breeding program. It could be used heavily in the Midwest where bulls are used in rotational breeding programs to produce cattle in a retained ownership program or are simply sold to backgrounders. This is the only index that has no emphasis on fertility. Remember that nothing is retained in the herd.

Stand out with Proven Genetics

THE HEREFORD ADVANTAGE PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHBS index.

PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at HerefordFeederCattle.com

Certified Hereford Beef Index(CHBS) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHBS value ranking in the top 50%.
